

GREAT NEWS

BLUEDU has been launched.

BLUEDU provides VET teachers

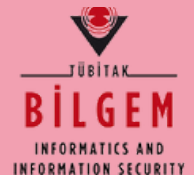

with the tools necessary to comprehend, study and finally understand **blockchain technology**. This is necessary as we live in a world that has implemented this technology practically in all areas and therefore tomorrow's workers will need to have extensive knowledge of this technology.

The project will develop a **teaching outline** which constitutes the baseline for the teaching materials, and which is complemented with an **interactive e-book on blockchain technologies** including subject areas in various topics for **VET educators**. These materials will be available in **English, Turkish and Spanish**.

The project partners all have significant knowledge of the challenges and problems related to **internet technologies** and related **cutting-edge technologies**, terms in blockchain, **blockchain technology, blockchain technology in education**, and recommendations for the use of blockchain technology. This guarantees the quality of the developed materials.
